

Redireccionando a una página en específico

The image is a composite screenshot illustrating a redirection process. At the top, a browser window shows the website **cbtis75.edu.mx**. The site features a header with navigation links: Inicio, Plantel, Comunidad, Cbtis Virtual, Programas Institucionales, Transparencia, Enlaces, and Contacto. A large banner for the **48 ANIVERSARIO CBTis 75** is displayed, along with a Facebook link and a Google account sidebar for **YAZMIN GUADALUPE CASTILLO QUINTERO**.

Below the browser window, a Visual Studio Code editor shows a PHP script in `ejercicio2.php` that sets a header to redirect to a specific Google Docs document:

```
1 <?php
2 header("Location: https://www.cbtis75.edu.mx/");
3 ?>
4
5 Instrucción que despliega el nombre del propietario del script
6
7 <?php
8 echo "Propietario: " . $_get_current_user()."\n";
9 ?>
10
```

At the bottom, a Google Docs interface is shown, displaying the document `docs.google.com/document/d/1nGUKW9X36zYfVYn4b-L...`. The Google account sidebar is visible, showing the same user profile as the browser window above.
